Testing Document and Specification for Budget Bridge Web App Test Specification

Test Case ID:	4.1.1
Title:	Register & Login Page
Feature/Subfeature:	Username and password validation
Purpose:	To ensure that users are able to save their income and expenses in an account that they can log out and log back into to keep using Budget Bridge through multiple user sessions.
Initial Conditions:	The user does not have an account already
Test Data:	Test data will include invalid usernames and invalid passwords to make sure our register & login functionality validates user input before it gets sent to our backend.
Test Actions:	1. Go to the link that has our deployed web application, which the user should land on the register & login page 2. User selects "Register" 3. User enters email address 4. User enters password with correct requirements 5. User verifies password (enters password twice) 6. User selects "Create Account" 7. User clicks "Login" 8. User enters in user address (from step 3) 9. User enters in password (from step 5) 10. User clicks "Login" and the user should land on the dashboard page
Expected Results:	After step #3, the UI should that the user has successfully created an account. After step #10, if the user immediately goes to the dashboard page, which means that the username and password they registered with was successfully entered into the backend.

Test Case ID:	4.1.2
Title:	Dashboard Page
Feature/Subfeature:	Pulling income and expense data from user accounts that already have data entered.
Purpose:	To ensure that the users are able to have an overview of their income and spending from a month perspective.

Initial Conditions:	The user has successfully created an account on the register & login page and logs in. Dashboard is given financial data from account that's stored in our MySQL database.
Test Data:	Test Data will include example dashboard data that the dashboard page will show.
Test Actions:	1. Go to the link that has our deployed web application, which the user should land on the register & login page 2. User inputs the username and password that's linked to their registered account 3. The user presses "Login" and the user should land on the Dashboard page 4. The user scrolls down the page to see income and expense info 5. The user applies filter/sorting to view desired data 6. The user selects the Chat bot icon to ask questions 7. The user clicks error icon for list of API errors
Expected Results:	The user is able to execute the functionalities as described in steps 4-7

Test Case ID:	4.1.3
Title:	Spending Page
Feature/Subfeature:	Adding a new expense
Purpose:	To ensure that users are able to input new expenses that they may have.
Initial Conditions:	The user is logged in and is on the Spending page.
Test Data:	Test data will include entering in a dummy expense. - Category: Food - Description: McDonalds - Amount (\$): 14
Test Actions:	1. Go to the link that has our deployed web application, which the user should land on the register & login page 2. User inputs the username and password that's linked to their registered account 3. The user presses "Login" and the user should land on the Dashboard page 4. The user clicks on "Spending" on the left sidebar to access the Spending page 5. On the spending page, in the "Expense History" section the user sorts and filters the expense entries that are in the spending table 6. The user deletes one expense entry from the list of

	expenses 7. The user should see the charts visually change as user adjust the spending/expense entries
Expected Results:	The user successfully demonstrates all of the functionalities as described in steps 5-7

Test Case ID:	4.1.4
Title:	Income Page
Feature/Subfeature:	The income page shows an overview of the user's income history and income by category The user is able to add and remove income entries.
Purpose:	To ensure that registered users can add and remove income entries that make up their entire income history.
Initial Conditions:	A registered user is logged in and currently on the Dashboard page.
Test Data:	A dummy user with dummy income data will be used to test if the income page shows the correct content.
Test Actions:	1. On the dashboard page, the user clicks on "Income" on the left sidebar to access the Income page 2. On the income page, the user presses the "Add Income" button 3. The user inputs the income's category, description and amount 4. The user presses "Add Income" 5. The user scrolls down to view their total income 6. The user views the income table that shows their income by category 7. The user goes to the "Income History" section and uses the sort and filter buttons to filter the income table 8. The user should see charts that change accordingly as the user adjusts income 9. The user deletes 1 income entry from the list of income
Expected Results:	The user is able to execute the functionality with no system errors as described in steps 2-9

Test Case ID:	4.1.5
Title:	Profile Page
Feature/Subfeature:	The user is able to edit their account name, username and

	email The user is able to change their password The user is able to toggle between dark and light mode
Purpose:	To ensure that registered users can edit their profile information in case they made a mistake during when they registered an account
Initial Conditions:	The registered user is logged in and on currently on the dashboard page
Test Data:	A dummy user in the database that uses a dummy email address, username and a password.
Test Actions:	1. On the dashboard page, the user clicks on “Profile” on the left sidebar to access the Profile page 2. The user is able to view their user info: 3. The user clicks on the “Edit Profile” button to make changes to user info 4. The user clicks on “Save Changes” or Cancel 5. The user clicks on the “Change Password” button 6. The user enters their current password 7. The user enters in a valid new password 8. The user confirms the valid new password 9. The user confirms or cancel the change password process 10. The user views their account settings and sees these 3 things - Account type - Status - Member since
Expected Results:	The user is able to do execute functionality related to editing their profile settings as described in steps 3-4 The user is able to go through changing their password without any technical errors as described in steps 5-9 The user is able to visually see information about their account in the “Account Settings” section.
