Project Title: BudgetBridge Web App	Project Manager:
Start Date: 1/20/2026	Project Sponsor:
End Date: 05/04/2026	Customer: Commerce Bank customer
Purpose (Problem or Opportunity): Personal finance web application designed to provide Commerce Bank customers with tools for budget management and bank activity monitoring. The app allows users to track income and expenses, view financial trends on a dashboard, and interact with an LLM financial assistant.	
Goals: • Develop a secure and user-friendly budgeting web app. • Provide financial insights with LLM chat assistant. • Maintain separate frontend and backend.	Objectives: • Implement a secure user authentication system with verification and password reset • Develop income and expense tracking with categorization and date filter. • Build an interactive dashboard with visual breakdowns of financial activity. • Integrate an LLM assistant (Ollama) for personalized financial advice. • Deploy a RESTful Spring Boot backend connected to a persistent relation database.
Features: Login page, User database storage, Home page/dashboard, LLM integration	
Schedule Information (Major milestones and deliverables): • 01/20/2026 – Project Start • 03/30/2026 – Backend Implementation Functional • 03/30/2026 – Frontend Implementation Functional • 04/24/2026 – Unit tests complete • 05/04/2026 – Project End/ Final Delivery	Financial Information: • Budget: \$0.00 (no paid services or licenses) • Actual cost: \$100 (cloud hosting rental fee)

Constraints: • No WordPress CMS. • No JWT authentication; session-based authentication only • Frontend and backend must remain fully separated (decoupled architecture). • LLM integration (self-hosted, no paid API)	Assumptions: • Users have access to a valid email address for account verification and password reset. • Only standard end-user role is implemented. • Ollama service and compatible hardware are available for LLM inference.
Project scope: • User registration/login with email verification • income and expense operations • dashboard analytics (monthly trends, spending by category) • income by category, recent transactions) • LLM chat assistant with financial context • User profile	
Project Priorities: • Security of financial data (authentication, session management, input validation). • User-friendly front-end • Accurate financial calculations and dashboard analytics.	Success Criteria: • Fully functional front-end and back-end, signed off by project manager, sponsor, and key contributors. • All core features (authentication, income/expense tracking, dashboard, LLM chat, profile) are operational. • No critical or high-severity defects remain open at project close. • Application is deployed and accessible via GitHub Pages and Google Cloud Run.
Risks and obstacles to success: Finding the right language model, compatible requirements, and cloud integration
